

Clear Liners

Clear Liner uses a series of plastic aligners placed over the teeth to help you have straighter teeth and a proper bite. The aligners are made of a smooth, transparent plastic that is virtually invisible. Like traditional braces, the Clear Liners system slowly shifts your teeth to a proper position.

Night Appliances

One of the best ways to combat teeth grinding is by wearing a night appliance. A night appliance is a mouthpiece you wear while you sleep that forms a protective layer between your upper and lower teeth. They will prevent you from doing any damage to your teeth or jaw caused by teeth grinding during sleep.

Sport Guards

Our office will custom-fit sport guards perfectly to your mouth, ensuring cushioning in the right places and keeping your bite intact. Although you can pick up a generic version at a local drugstore or sporting goods store, it is highly recommended to be made by a professional, ensuring proper fitment, function, and protection.
